13. ABSTRACT (Maximum 200 words) <p>This research project attempted to forecast monthly accessions and losses from the Army's Delayed Entry Program (DEP) using information about the current length of stay of an individual in the DEP. This required the estimation of the <i>conditional</i> probabilities of an individual becoming an accession/loss from the DEP given his/her current length of stay using historical records. The accuracy of the procedure was tested by forecasting "future" numbers of accessions/losses for several months for which the actual numbers of accessions/losses were available. This entire procedure was carried out separately for each of 22 mission box categories which the U.S. Army Recruiting Command uses to classify entrants to the DEP by gender, education, mental category, and prior service.</p> <p>Results of this forecasting effort were quite good when looking at an entire year, but the <i>monthly</i> forecasting results were off probably due to the fact that the DEP population displays <i>seasonal</i> behavior with respect to accession/loss from the DEP.</p>

Forecasting Future Accessions and Losses from the Delayed Entry Program

by

Paul R. Milch

and

Lyn R. Whitaker

1. Introduction

The Delayed Entry Program (DEP) has been the chief vehicle for bringing new recruits into the U.S. Army for more than a decade. As currently operated the DEP signs contracts with potential new recruits to enter the Army within a fixed period of time (one to twelve months) which may differ depending on the characteristics of the potential recruit. Namely, individuals are categorized into twenty-two different "mission boxes" by gender, education, mental ability and prior years of service. Appendix A gives the list of these mission boxes with brief explanation of the codes used.

In each of these twenty-two mission boxes the Army has specific mission requirements for every fiscal year. Although the enlistment contract signed by entrants to the DEP are legally binding obligations, USAREC allows individuals to break their contract and become losses from the DEP. Due to the

unpredictability of individuals' contract behavior, USAREC has often had difficulty meeting its mission requirements in any given mission box category.

2. Objective

Based on the results of earlier analyses by Vales [2], the objective of this project was to discover if future number of accessions and losses from the DEP could be predicted for each mission box with reasonable accuracy knowing the current duration of time in the DEP of each individual currently in the DEP. If these numbers of accessions and losses can be forecasted for several months in advance with reasonable accuracy then USAREC might be able to adjust mission requirements in time and still supply the required number of recruits in each mission box category; and ultimately use such forecasts as inputs to a decision aid patterned after that of Burris [1].

3. The Data File

The data made available by USAREC in ASCII format consist of records of individuals in the DEP from the fiscal years 1988 to 1995. The data include the following in addition to some other variables that are not mentioned here because they were *not* used:

Contract Date – this is the day when the contract was signed;

Projected Active Duty Date (PADD) – this is the day the individual is *scheduled* to enter the Army by contract;

Accession Date – this is the day when the individual actually entered the Army; it is 0 if this has not occurred;

Discharge Date – this is the day when the individual became a loss from the DEP; it is 0 if this has not occurred;

Mission Box Category – this is an integer from 1 to 22 whose meaning is explained in Appendix A.

All dates are given in the YYMMDD format, e.g., 921003 means 3 October 1992.

The data were first processed and sorted to facilitate the computation that was to follow. Since the original ASCII file was huge, almost 19MB large, removing the unessential variables from it was also a goal. The processing also included the computation of the *contracted* DEPlength defined as the number of days between Contract Date and PADD divided by the ratio of 365 to 12, which is the *average* number of days in a month. This gives the number of months the individual is *scheduled* to spend in the DEP by the contract. This number was rounded to the nearest integer and also forced to be between 1 and 12, as the legal length of a contract must be between these two numbers.

A small number of DEPlengths originally calculated to be zero months. Under further investigation it was revealed that in the overwhelming majority of these cases the Contract Date and the PADD were actually identical. There were a total of 529 such records and in all but 23 cases the Accession or Discharge Date was also the same as the Contract Date. It was decided that these 529 records should *not* be included in the analysis on the grounds that these records were not truly DEP records. As such, the computation carried out subsequently excluded these 529 records.

All records were sorted by mission box and contracted DEPlength into $22 \times 12 = 264$ separate ASCII files. These are named to reveal the relevant mission box and DEPlength. For example, the file named "MB04DL06.DAT" contains all records of mission box 4 (GMB) with contracted DEPlength of 6 months. Table 1 displays the number of records in each file as well as the totals by mission box or by DEPlength. Table 2 shows the percentage of records in each file of the total number of 615,872 records.

It was originally expected that the actual number of months spent in the DEP by an individual would conform to the same rules as the contracted DEPlength, i.e. be between 1 and 12 months, even if the actual figures would occasionally be quite different from the contracted DEPlength. Indeed, overall for the large majority of records it is true that the *actual* DEPlength, when measured the same way as the contracted DEPlength, was less than or equal to the contracted DEPlength. The actual DEPlength was measured as the number of days between Contract Date and Accession Date or Discharge Date divided by 365 over 12 (about 30.42) and rounded to the nearest integer. Once the 529 "instant accessions/losses" mentioned above were omitted there remained only a small number of records whose actual DEPlength was less than .5 months and thus rounded to zero. These actual DEPlengths were changed to 1 month. However, at the other end of the scale, a *not* insignificant number of records showed actual DEPlength *beyond* their contracted DEPlength and even well beyond 12 months. As Table 3 shows there are 7373 contracts in the data base which stay in the DEP longer than their originally contracted DEPlength. Most of these (6988 records) occur among records with originally contracted DEPlength of 12 months. In fact, Table 4 shows that nearly 30% of all records with contracted DEPlength of 12 months stay in the DEP longer than that time and among some important mission boxes the percentage is much larger than that. For example, among mission box 2 (GMA) records with contracted DEPlength of 12 months, more than 63% stay in the DEP beyond the 12 month period. It is likely that these contracts are renegotiated during the individual's stay in the DEP, but unfortunately the data do not contain this piece of information. As a further complication, there is a small number (219 to be exact) of records which are still open, but these were not counted among the 7373 records that stay longer than

their original contract. These still-open records were omitted later in the calculation, but the rest of the records with longer than 12 months of actual DEPlength were left uncorrected, taking their DEPlengths of 14, 18, or even 25 months as legitimate. The reason for this was that it was considered important for forecasting purposes to take into account this significant fraction of records that access (or discharge) later (even much later) than their original PADD.

4. Method of Forecasting Future Accessions and Losses

The idea behind the method of forecasting future accessions and losses as explained in this section is that the length of time already spent in the DEP must be a significant factor in determining how much *more* time an individual will still spend in the DEP, given his/her mission box and contracted DEPlength. That idea suggests the use of *conditional* probabilities of accession or loss given the time already spent in the DEP. This necessitates the introduction of conditional probabilities of accession and loss, as well as the marginal probabilities and "survival" probabilities.

First of all, we consider only records of individuals in the DEP of a single mission box, called MB, and a fixed contracted DEPlength, called DL. We note

that the data were also organized in just such a way that all such records (and no others) are contained in a single data file.

Next we introduce

T = the time actually spent in the DEP by a randomly selected individual with mission box MB and contracted DEPlength DL.

Regarding T as a random variable we shall introduce its distribution as well. First we note that this individual will eventually either be accessed by the Army or be discharged from the DEP, thereby becoming a loss to the Army. Therefore, we define the events

A = the individual becomes an Accession to the Army eventually; and

L = the individual becomes a Loss to the Army eventually.

Therefore, we must have

$$P(A) + P(L) = 1$$

where $P(A)$ and $P(L)$ stand for the probabilities of events A and L occurring, respectively.

Next we assume that T is a discrete random variable with the possible values of 1, 2, 3, ...months. Although the data which include the exact date of accession/discharge would also support an assumption that T takes values measured in days rather than months, the actual DEPlength, which T measures, is usually computed from the data in number of months. Therefore, we introduce two probability mass functions (PMFs) for T :

$f_A(i) = P(T = i \text{ months}, A)$
= Probability that an individual becomes an accession after spending exactly i months in the DEP

$f_L(i) = P(T = i \text{ months}, L)$
= Probability that an individual becomes a loss after spending exactly i months in the DEP

for $i = 1, 2, \dots$

We are assuming here that

$$f_A(i) = f_L(i) = 0 \text{ for all } i \neq 1, 2, \dots$$

Note, in particular, that $f_A(0) = f_L(0) = 0$ is assumed which is in agreement with the fact that records of individuals who access or discharge from the DEP in less than .5 months are excluded from subsequent analysis as was explained in Section 3. At the other end of the scale, we must allow i to become larger than DL, the contracted DEP length, or even 12 months due to the fact that many individuals do stay in the DEP as explained in Section 3.

Note that the probabilities of eventual accession and loss are computed as

$$P(A) = \sum_{i=1}^{\infty} f_A(i)$$

and

$$P(L) = \sum_{i=1}^{\infty} f_L(i)$$

respectively.

Next we define the "survivor" probabilities:

$$G_A(j) = P(T > j, A) = \sum_{i=j+1}^{\infty} f_A(i)$$

and

$$G_L(j) = P(T > j, L) = \sum_{i=j+1}^{\infty} f_L(i)$$

for $j = 0, 1, 2, \dots$

These are, respectively, the probabilities that an individual becomes an accession or loss after spending more than j months in the DEP. Note that

$$G_A(0) = \sum_{i=1}^{\infty} f_A(i) = P(A)$$

and

$$G_L(0) = \sum_{i=1}^{\infty} f_L(i) = P(L).$$

Now we may define the conditional probability mass functions of T , given that an individual stays in the DEP more than a fixed amount of time. These are

$$\begin{aligned} q_A(i|j) &= P(T = j+i, A | T > j) \\ &= \text{Conditional probability that an individual who "survived" more than } j \text{ months in the DEP will become an Accession exactly } i \text{ months later (i.e. after exactly } j+i \text{ months in the DEP)} \end{aligned}$$

and

$$\begin{aligned} q_L(i|j) &= P(T = j+i, L | T > j) \\ &= \text{Conditional probability that an individual who "survived" more than } j \text{ months in the DEP will become a Loss exactly } i \text{ months later (i.e. after exactly } j+i \text{ months in the DEP)} \end{aligned}$$

for $i = 1, 2, \dots$ and $j = 0, 1, 2, \dots$

Note that we have the relationships:

$$q_A(i|j) = \frac{f_A(j+i)}{G_A(j) + G_L(j)}$$

and

$$q_L(i|j) = \frac{f_L(j+i)}{G_A(j) + G_L(j)}$$

for $i = 1, 2, \dots$ and $j = 0, 1, \dots$

The goal here is to establish a method of *estimating* $q_A(i|j)$ and $q_L(i|j)$ from a set of *closed* records, i.e. records of individuals who have already become accessions or losses from the DEP, and then using these quantities, to forecast future accessions and losses from a set of *open* records.

The method of estimation is straightforward and uses the empirical proportions rather than a parametric model. This approach is used because

empirical proportions can easily be adjusted over time by using records going back for a fixed period of time in the past and then dropping records as they become older than that fixed period of time. More complicated models require higher maintenance and need refitting and evaluation more frequently. This will be true particularly for DEP loss and accession forecasting because there are substantial changes in certain properties over time.

The following notation is established for a set of closed records of individuals.

Let, for $i = 1, 2, \dots$

$N_A(i)$ = no. of records of individuals in a set of closed records that become Accessions in exactly i months, and

$N_L(i)$ = no. of records of individuals in a set of closed records that become Losses in exactly i months.

Also define, for $i = 1, 2, \dots$

$N_A = \sum_{i=1}^{\infty} N_A(i)$ = no. of records of individuals who become Accessions eventually; and

$N_L = \sum_{i=1}^{\infty} N_L(i)$ = no. of records of individuals who become Losses eventually.

Finally,

$N = N_A + N_L$ = total number of records of individuals.

Now we estimate $f_A(i)$ and $f_L(i)$ as:

$$\hat{f}_A(i) = \frac{N_A(i)}{N} \quad \text{and} \quad \hat{f}_L(i) = \frac{N_L(i)}{N}$$

for $i = 1, 2, \dots$

Next, we estimate $G_A(j)$ and $G_L(j)$ as:

$$\hat{G}_A(j) = \sum_{i=j+1}^{\infty} \hat{f}_A(i) \quad \text{and} \quad \hat{G}_L(j) = \sum_{i=j+1}^{\infty} \hat{f}_L(i)$$

for $j = 0, 1, \dots$

Finally, we estimate $q_A(i | j)$ and $q_L(i | j)$ as:

$$\hat{q}_A(i | j) = \frac{\hat{f}_A(j+i)}{\hat{G}_A(j) + \hat{G}_L(j)} \quad \text{and} \quad \hat{q}_L(i | j) = \frac{\hat{f}_L(j+i)}{\hat{G}_A(j) + \hat{G}_L(j)}$$

for $i = 1, 2, \dots$ and $j = 0, 1, \dots$

The method of estimation of the conditional probability mass functions having been established we proceed to the method of forecasting future accessions and losses. For this we consider a set of *open* records of individuals and define the following notation for a given date called "NOW".

Let, for $j = 0, 1, \dots$

$R(j)$ = no. of open records of individuals who have been in the DEP exactly j months, as of NOW.

Also, introduce:

$A(i | j)$ = the number of $R(j)$ records of individuals who have been in the DEP exactly j months as of NOW and will become Accessions exactly i months from NOW; and

$L(i | j)$ = the number of $R(j)$ records of individuals who have been in the DEP exactly j months as of NOW and will become Losses exactly i months from NOW,

for $i = 1, 2, \dots, 12$ and $j = 0, 1, \dots$

Then forecasts of $A(i | j)$ and $L(i | j)$ are given, respectively, by

$$\hat{A}(i | j) = R(j) \hat{q}_A(i | j)$$

and

$$\hat{L}(i|j) = R(j)\hat{q}_L(i|j)$$

for $i = 1, 2, \dots, 12$ and $j = 0, 1, \dots$

Finally, if $A(i)$ and $L(i)$ denote the total number of Accessions/Losses i months from NOW, i.e.

$$A(i) = \sum_{j=0}^{\infty} A(i|j) \quad \text{and} \quad L(i) = \sum_{j=0}^{\infty} L(i|j)$$

then these may be forecasted, respectively, as

$$\hat{A}(i) = \sum_{j=0}^{\infty} A(i|j) = \sum_{j=0}^{\infty} \hat{q}_A(i|j)R(j)$$

and

$$\hat{L}(i) = \sum_{j=0}^{\infty} L(i|j) = \sum_{j=0}^{\infty} \hat{q}_L(i|j)R(j)$$

for $i = 1, 2, \dots, 12$.

5. Computational Effort

The burden of handling large amounts of data required more sophisticated software than ordinary spreadsheets could provide. The choice made was APL (A Programming Language) * PLUS III for Windows, Version 1. Programs were written (with plentiful documentation) in this language for forecasting future accessions and losses using the formulas derived at the end of the previous section. The program FORECASTALL is applicable for a current date, labeled "NOW" in the previous section, and one of the twenty-two mission boxes, denoted as "MB". This program then forecasts and displays the number of accessions/losses, for the relevant mission box category, for each of the next twelve months past the date "NOW" by contracted DEPlengths 1 through 12. The display also shows *total* number of accessions/ losses either by months (last row) or by contracted DEPlengths (last column). Note that all the

accessions/losses are forecasted from among those records in the DEP which are open on the date "NOW". One such display is shown in Table 5 for "NOW" date 15 March 1992 and for mission box 1 (SMA).

Another program called CHECKALLREC was constructed in the same format to count all *actual* accessions/losses (from among the open records) occurring 1 through 12 months past the date "NOW" by contracted DEPlengths for a given mission box "MB". Care was taken to select dates for "NOW" that are well prior to more than 12 months before the beginning of FY1995 where our data end. This program also displays the number of accessions/losses in the same table format as the forecasts, including totals by months or contracted DEPlengths. An example of such a display is shown in Table 6 for the "NOW" date 15 March 1992 and for mission box 1.

To facilitate the comparison between the forecasts and the actual accessions/losses a third program called COMPPCTERR was constructed that simply computes the percent errors in the forecasts according to the formula:

$$PCTERR = 100 \times \frac{\text{Forecast} - \text{Actual}}{\text{Actual}}$$

This program also displays the result in a similar table format, an example of which is provided in Table 7 for the same date and mission box as before. These displays may be a good way to begin the analysis of the results of the forecasting effort. This will be accomplished in the next section.

Finally, another program, called EVALUATE, was created by putting together the previous three programs. All programs, including all subroutines used in the major programs mentioned, are listed in Appendix B. Displays similar to those

shown in Tables 5, 6, and 7 for other dates and mission boxes are shown in Appendix A.

6. Results and Analysis

The first striking thing to notice about the data investigated here was the large number of fluctuations encountered in the *number* of open records on a given date over the period FY1988 through FY1994. For example, when open records of mission box 2 (GMA) were counted on the 15th of each month, over that period of time the number of such records ranged between a low of 418 and a high of 14,271 with the average being 6,752 records. Similar fluctuations were observed for the other major mission box categories.

Moving on to the actual forecasts and their accuracies, the tendency was to have reasonably accurate forecasts over the period of an entire year. For example,

forecasting for mission box 1 (SMA) out of a total of 11,770 open records on 15 January 1992, 9,079 were *forecasted* to access and 2,681 to become losses within the next 12 months. The *actual* number of accessions and losses were 9,231 and 2,526 respectively. These results amount to an underestimation of accessions by less than 2% and an overestimation of losses by slightly more than 6%. See Appendix B for all these mission box 1 forecasts for 1992 and 1993.

While these results are not overwhelmingly good, they are quite acceptable. These errors are typical of the errors encountered in general for periods of an entire year:

- (i) accuracy in forecasting accessions were usually better than in forecasting losses, probably due to the higher volume;
- (ii) accessions were usually underestimated, whereas losses were usually overestimated;
- (iii) when the number of open records became larger/smaller the accuracy of the estimation procedure got better/worse, in general.

However, this last point was not universally true. Instead, a seasonal factor seemed to manifest itself as well. Observing the percent errors over an entire year in forecasting accessions/losses among open records on the 15th of every month of 1992 for mission box 1, the errors grew larger for open records in the months of May through September, after which the errors reduced again in October. This phenomenon seemed to appear somewhat independently of when the total number of open records increased or decreased. Thus, for example, on 15 June 1992 there was a large number (14,720) of open records, yet the forecast errors were -7% and 32%, respectively, for accessions and losses; not particularly good for such large volume. In contrast, on 15 October 1992 with only 3,924 open records, the errors were only -1% and 9% for accessions and losses, respectively.

It was this phenomenon among others that suggested that seasonality plays a significant role in the accuracy (or lack thereof) of the forecasts. This point becomes more apparent when looking at forecasts on a monthly basis. Examine, for instance, Table 8 showing the percent errors of forecasting accessions/losses among all open records of mission box 1 on 15 February 1992. Although the percent errors for forecasting accessions/losses for an entire year past that date are remarkably small (0% and 2%, respectively) the errors in month-by-month forecasting fluctuate between -35% and 686% for accessions and between -50% and 195% for losses. These errors occur in spite of the fact that the total number of open records on that date was large, namely 10,599. While the actual number of accessions/losses on a monthly basis was often quite small, the biggest errors *did not* necessarily occur in those places. For that reason seasonal variation seems

to be a better explanation for the large percent errors that occurred in the *monthly* forecasts of accessions/losses.

More specifically, it is quite possible that individuals contracted in the winter quarter behave quite differently from individuals contracted in the spring, summer or fall quarters. Since the estimation and forecasting procedure explained in Section 4 lumps all data together, it is not surprising that when forecasting accessions/losses on a *monthly* basis using general estimates of the conditional probability mass functions from totally aggregate data, the monthly forecasts turn out to be highly inaccurate, sometimes overestimating, other times underestimating the actual accessions/losses, more or less averaging out over the duration of an entire year.

The remedy to this problem is likely to be to segment the data seasonally, e.g. by quarters and estimate conditional probability mass functions separately for each quarter and then use them to forecast for like quarters only. The details of this procedure would have to be worked out more precisely, including the question of whether quarterly or monthly or other seasonality segmentation would serve best the interests of accuracy in forecasting.

Another possibility for improving the accuracy of forecasting is to introduce smoothing of the estimated probabilities. For example, the proportion of DEP losses is highest for the first and last months spent in DEP (Vales [2]) and often very small for the middle months. Thus, data for the middle months can be combined to give pooled estimates of the proportion of losses and accessions for those months. Yet another possibility is to smooth the estimates using a parametric approach such as loglinear modeling rather than the empirical probabilities. Because a parametric model of losses and accessions can change dramatically over time, this approach would need to be done with quite a bit of care.

APPENDIX C

APL Programming Codes

```
[0] PDATE EVALUATE MB;FCAST;ACT;PCTERR
[1] ⋄This function puts it all together:
[2] ⋄1. Forecasting future accessions and losses for the given mission box 'MB' for up to
[3] ⋄ 12 months past the 'PDATE';
[4] ⋄2. Computing actual accessions and losses for same mission box and same time period;
[5] ⋄3. Computing and displaying percent errors in forecasting.
[6] FCAST+PDATE FORECASTALL MB
[7] ACT+PDATE CHECKALLREC MB
[8] PCTERR+FCAST COMPPCTERR ACT
```

```
[0] FRCSTA←PDATE FORECASTALL MB;T;ADLMAX;FSIZES;FSIZERO;NRALL;CPALL;CPALLDL;FRCSTA;FRCSTL;I;IDIM;BT
[1] ;ET;CT;CN;RN;FSTR;TITLE1;TITLE2;C
[1] ⋄Compute number of accessions/losses T months past PDATE by contracted DEPlength
[2] ⋄for T=1,...,12
[3] ⋄Other functions used are: OPENRECALL, COMPALLPROB, 'ROWNAMES', 'CENTER', 'COLNAMES'
[4] BT←(100 365 12 24 60 60 1000)↓ITS ⋄Record begining time of computation
[5] ⋄Ties all ASCII files with mission box 'MB', defines their sizes and ranks them:
[6] FSIZERO←TIEALLDIFILES MB ⋄Results are the rank orders of the 12 filesizes
[7] T←1 ⋄ FRCSTLALL←FRCSTAALL+12 0P0 ⋄Initialize variables
[8] NRALL←PDATE OPENALLREC MB
[9] CPALLDL←0 2 12 13P0 ⋄Initialize
[10] ⋄This is a loop that computes conditional probabilities of accession/loss
[11] LOOP:CPALL←PDATE COMPALLPROB MB
[12] CPALL←(2,12,(1+NRALL))+CPALL ⋄Pick up only as many columns as in 'NRALL'
[13] FRCSTA←CPALL[1;;]+.×NRALL ⋄ FRCSTL←CPALL[2;;]+.×NRALL
[14] IDIM←1+PFRCSTA ⋄ I←(1IDIM)..=(1IDIM) ⋄Create identity matrix
[15] ⋄These are the number of accessions/losses 'T' months from 'PDATE':
[16] FRCSTA←(IDIM,1)P+/FRCSTA×I ⋄ FRCSTL←(IDIM,1)P+/FRCSTL×I
[17] FRCSTAALL←FRCSTAALL,FRCSTA ⋄ FRCSTLALL←FRCSTLALL,FRCSTL
[18] +(ADLMAX>T←T+1)/LOOP
[19] ⋄Keep only first 11 months of forecasts separately and lump the rest in 12th month:
[20] FRCSTAALL←((12 11)+FRCSTAALL),+/(0 11)+FRCSTAALL
[21] FRCSTLALL←((12 11)+FRCSTLALL),+/(0 11)+FRCSTLALL
[22] ⋄Attach column and row sums:
[23] FRCSTAALL←FRCSTAALL,[1]+FRCSTAALL+FRCSTAALL,+/FRCSTAALL
[24] FRCSTLALL←FRCSTLALL,[1]+FRCSTLALL+FRCSTLALL,+/FRCSTLALL
[25] FRCST←FRCSTAALL,[.5]FRCSTLALL
[26] ET←(100 365 12 24 60 60 1000)↓ITS ⋄Record ending time of computation
[27] CT←(ET-BT)÷1000 ⋄ CT←(60 60)TCT ⋄ UTCFF ⋄Time elapsed in min & sec
[28]
[29] ⋄Set up formating for results with title, column names & row names:
[30] TITLE1←'ESTIMATED NUMBER OF ACCESSIONS T MONTHS AFTER ',*PDATE
[31] TITLE2←'BY CONTRACTED DEPLENGTH FOR MISSION BOX ',*MB
[32] CN←', T=, 1M, 2M, 3M, 4M, 5M, 6M, 7M, 8M, 9M, 10M, 11M, 12M, ALL'
[33] RN←',DL=12,DL=11,DL=10,DL= 9,DL= 8,DL= 7,DL= 6,DL= 5,DL= 4,DL= 3,DL= 2,DL= 1,TOTAL'
[34] RN←13 5 ROWNAMES RN ⋄ FSTR←'5A1,13I6'
[35] TITLE1←FSTR CENTER TITLE1 ⋄ TITLE2←FSTR CENTER TITLE2
[36] CN+FSTR COLNAMES CN ⋄ FRCSTAALL+FSTR DFMT (RN;FRCSTAALL)
[37] TITLE1 ⋄ TITLE2 ⋄ UTCNUL ⋄ CN ⋄ FRCSTAALL
[38] ⋄Collect title, column heading and table in one format:
[39] FRCSTAALL←TITLE1,[1]TITLE2,[1]CN,[1]FRCSTAALL
[40] TITLE1←'ESTIMATED NUMBER OF LOSSES T MONTHS AFTER ',*PDATE
[41] TITLE1←FSTR CENTER TITLE1 ⋄ FRCSTLALL+FSTR DFMT (RN;FRCSTLALL)
[42] UTCNL ⋄ UTCFLF ⋄ TITLE1 ⋄ TITLE2 ⋄ UTCNUL ⋄ CN ⋄ FRCSTLALL ⋄ UTCNL
[43] ⋄Collect title, column heading and table in one format:
[44] FRCSTLALL←TITLE1,[1]TITLE2,[1]CN,[1]FRCSTLALL
[45] 'COMPUTATION TIME WAS: ',(*CT[1]),' MINUTE(S) AND ',(*CT[2]),' SECONDS.'
```

```

[0] ALLRECS+PDATE CHECKALLREC MB;BT;ET;CT;DL;TNACC;TNLOSS;TITLE1;TITLE2;CN;RN;FSTR

[11] FSIZERO+@FSIZES @These are the rank orders of the file sizes starting with largest

```

```

[0] NRALL+PDATE OPENALLREC MB;BT;DLRO;NREC;TITLE1;TITLE2;RN;CN;FSTR;ET;CT;NRECALL
[1]   AComputes from ASCII datafiles with a specific mission box(MB) and all contracted
[2]   ADEPlengths the number of open records with T=0,1,2, ... months in DEP on a
[3]   Aspecified date(PDATE).
[4]   AOther functions used are: 'TIEALLDLFILES', 'OPENREC', 'ROWNAMES', 'COLNAMES', 'CENTER'
[5]   BT+(100 365 12 24 60 60 1000)IPTS ARecord beginning time of computation
[6]
[7]   DLRO+1 ♦ NRECALL+(0 0)PADIMAX+0 AInitiate variables
[8]   LOOP:NREC+MB OPENREC FSIZERO[DLRO] AComputes number of open records for one 'DL'
[9]   ACatenate enough zeroes onto both variables to make dimensions fit:
[10]  NREC+NREC, (0+(1+PNRECALL)-PNREC)p0
[11]  NRECALL+NRECALL,((1+PNRECALL),(0+(PNREC)-(1+PNRECALL)))p0
[12]  NRECALL+NRECALL,[1]NREC ACatenates results for different DEPlengths
[13]  +(12+DLRO+DLRO+1)/LOOP
[14]  NRECALL+NRECALL,(12,(0=1+PNRECALL)*13)p0 AIf matrix is empty catenate matrix of 0's
[15]  NRALL+NRECALL+NRECALL[+FSIZERO;] AReplace normal order among DEPlengths: 12,...,1
[16]
[17]  ARetain only first 12 columns, with last one being sum of all records having 12 or
[18]  Amore actual months in DEP:
[19]  NRECALL+NRECALL[;112],+/(0 12)+NRECALL
[20]  NRECALL+NRECALL,[1]+NRECALL+NRECALL,+/NRECALL AAttach row & column sums
[21]  ET+(100 365 12 24 60 60 1000)IPTS ARecord ending time of computation
[22]  CT+(ET-BT)/1000 ♦ CT+(60 60)TCT ♦ UTCFF ATime elapsed in min & sec
[23]  'COMPUTATION TIME WAS: ',(TCT[1]),' MINUTES AND ',(TCT[2]),' SECONDS.'
[24]
[25]  ASet up formating for results with title, column names & row names:
[26]  TITLE1+'NUMBER OF OPEN RECORDS OF MISSION BOX ',(MB),' ON ',+PDATE
[27]  TITLE2+'THAT HAVE BEEN IN DEP T MONTHS'
[28]  CN+', T=, 0M, 1M, 2M, 3M, 4M, 5M, 6M, 7M, 8M, 9M, 10M, 11M, 12M, ALL'
[29]  RN+',DL=12,DL=11,DL=10,DL=9,DL=8,DL=7,DL=6,DL=5,DL=4,DL=3,DL=2,DL=1,TOTAL'
[30]  RN+ 13 6 ROWNAMES RN ♦ FSTR+'6A1,1416'
[31]  TITLE1+FSTR CENTER TITLE1 ♦ TITLE2+FSTR CENTER TITLE2
[32]  CN+FSTR COLNAMES CN ♦ NRECALL+FSTR OFMT(RN;NRECALL)
[33]  UTCNUL ♦ TITLE1 ♦ TITLE2 ♦ UTCNUL ♦ CN ♦ NRECALL ♦ UTCNUL

```

```

[0] NREC+MB OPENREC DL;RDFNAME;TN;NSIZE;K;CSIZE;CHUNK;INDX;COMPK;CD;CDE;AD;DD;ED;JPD;ADL;TIME;NADL
;ALLADL
[1]   AComputes from an ASCII datafile with a specific mission box(MB) and contracted
[2]   ADEPlength(DL) the number of open records with 0,1,2, ...ADLMAX months in DEP on
[3]   Aa specified date(PDATE), where 'ADLMAX' is the max # of actual months spent in DEP
[4]   Ain this file. 'PDATE' and first 'ADLMAX' are defined outside this function.
[5]   A'ADLMAX' is redefined here as stated above.
[6]   AOther functions used: 'EXPLORE', 'CDPICKPRIOR', 'REVROUND', 'CONVDATE', 'DATABASE', 'ROUND'
[7]   CSIZE+250800 A7600 records are selected at one time: 7600x33=250800
[8]   K+1 ♦ ALLADL+0p0 ♦ CDE+DATABASE PDATE AInitialize variables
[9]   LOOP:CHUNK+CSIZE1(FSIZES[DL]-CSIZE*(K-1)) ADefine size of next chunk to pick
[10]  COMPK+0NREAD (-DL),82,CHUNK,(CSIZE*(K-1)) ARead another portion of file
[11]  COMPK+(0 -2)+((1CHUNK+33),33)pCOMPK AForm matrix of records
[12]  ASelect records whose contract dates are prior to date specified by 'PDATE':
[13]  COMPK+PDATE CDPICKPRIOR COMPK
[14]  ANext convert contract, accession and discharge dates to Julian dates:
[15]  CD+,0 CONVDATE COMPK AConvert contract date to Julian date
[16]  AD+,12 CONVDATE COMPK AConvert accession date to Julian date
[17]  DD+,18 CONVDATE COMPK AConvert discharge date to Julian date
[18]  ED+AD/DD A Take smaller of these as end of DEP; Julian of 0 is 693960
[19]  CDE+1/CD,CDE AFInd earliest contract date
[20]  ASelect records with accession/discharge date on or later than 'PDATE' specified
[21]  AIncludes records with neither accession nor discharge dates:
[22]  JPD+DATABASE PDATE AJJulian version of 'PDATE'
[23]  INDX-JPD<ED ♦ INDX<(0<INDX)/pINDX
[24]  +(0=pINDX)/UPK AUpgrade K-value if no such records
[25]  ACompute time spent in DEP (called actual DEPlength) as of 'PDATE':
[26]  ADL+0 ROUND(JPD-CD[INDX])/(365+12) A365+12 is used as average # days in one month
[27]  ADL+0ADL AThis is to eliminate negative actual DEPlengths if any
[28]  ADLMAX+0 ROUND(JPD-CDE)/(365+12) AThis is max possible actual DEPlength as of 'PDATE'
[29]  ALLADL+ALLADL,ADL AKeep all actual DEPlengths
[30]  UPK:+(FSIZES[DL]>CSIZE*(-1+(K*K+1))/LOOP AGo to next chunk to convert
[31]  ACount records with various actual DEPlengths as of 'PDATE':
[32]  NADL+0p0 ♦ TIME+0 AInitiate variables; 'TIME' is actual DEPlength
[33]  +(0=pALLADL)/END ATerminate if there are no such records in entire file
[34]  TIMELOOP:INDX+,ALLADL=TIME
[35]  INDX-(INDX>0)/!pINDX AAll records with actual DEPlengths specified
[36]  NADL+NADL,pINDX ATotal number of records of given actual DEPlength
[37]  +(ADLMAX>TIME-TIME+1)/TIMELOOP ADGo next actual DEPlength
[38]  END:NREC-1+NADL AThis is the number of open records as of date specified

```

```

[0] MB CHECKREC DL;RDFNAME;TN;NSIZE;K;CSIZE;CHUNK;BIT;COLSIZE;INDX;JPD;COMPK;AD;DD;ED;IDXMAX;EDMAX
;NMAX;NEXP;T;NACC;NLOSS
[1] AComputes from an ASCII datafile with a specific mission box and contracted DEPlength
[2] athe number of accessions/losses T months after date specified by 'PDATE' among
[3] arecords which are open on 'DATE' for T=1,2,...,12. Note, however, that for T=12
[4] athe results include all accessions/losses 12 months or more after 'PDATE'.
[5] AOther functions used: 'EXPLORE', 'REVROUND', 'CDPICKPRIOR', 'CONVDATE', 'DATABASE'
[6] RDFNAME='C:\USAREC\NEWDATA\MERGED\MB',('2'+0',*MB)',DL',('2'+0',*DL'),'.DAT'
[7] UNNTIE INNUMS ◊ RDFNAME UNNTIE TN--1
[8] NSIZE+NSIZE TN ◊ -(0<NSIZE)/CONT ◊ -END
[9] CONT:COLSIZE+TN EXPLORE BIT+155 AThis is the number of columns in data file
[10] CSIZE+COLSIZE REVROUND 250000 A250000 is rounded to nearest multiple of 'COLSIZE' to assure th
at only complete records are in each component
[11] K+1 ◊ TNACC+TNLOSS+0 12P0 AInitialize variables
[12] LOOP: NACC+NLOSS+0P0 AInitialize variables
[13] CHUNK+CSIZEL (NSIZE-(K-1)×CSIZE) ADefine size of next chunk to pick
[14] COMPK+INREAD -1,82,CHUNK,(CSIZE×(K-1)) ARead another portion of file
[15] COMPK+((0~2)+((LCHUNK+COLSIZE),COLSIZE))PCOMPK AForm matrix of records
[16] ASelect records whose contract date is prior to date specified by 'PDATE':
[17] COMPK+PDATE CDPICKPRIOR COMPK
[18] +(0=(1+pCOMPK))/UPK AUpgrade K-value if no such records
[19] ASelects records whose accession/discharge date is on or after the specified date,
[20] abut less than 365 days after:
[21] AD+12 CONVDATE COMPK AConvert accession dates to Julian dates
[22] DD+18 CONVDATE COMPK AConvert discharge dates to Julian dates
[23] JPD+DATABASE PDATE AConvert date specified to Julian date
[24] ADefine end-of-DEP dates (where they exist) and the latest such date:
[25] ED+AD1DD ◊ IDXMAX+((IDXMAX>0)/1PIDXMAX+ED=693960 ◊ EDMAX+1/ED[(1PED)~IDXMAX]
[26] INDX+JPD≤ED+AD1DD ◊ INDX+(0<INDX)/1PINDX
[27] COMPK+COMPK[INDX,] ARestrict data to records with such accession/discharge dates
[28] +(0=(1+pCOMPK))/UPK AUpgrade K-value if no such records
[29] ED+ED[INDX] ◊ T+1
[30] ACount number of records being accessed/lossed 1,2,...,etc. months after 'PDATE':
[31] TLOOP:INDX+(ED≥JPD+((T-1)×365÷12))\ (ED<(JPD+(T×365÷12))) ◊ INDX+(0<INDX)/1PINDX
[32] NACC+NACC,+/COMPK[INDX,31]=#3 ◊ NLOSS+NLOSS,+/COMPK[INDX,31]=#4
[33] AAllow T-value to grow to include latest accession/loss:
[34] +(((EDMAX-JPD)÷(365÷12))+1)≥T+T+1/TLOOP AAllow T-value to grow to include latest accession/l
oss
[35] ADefine larger number of records for this T-value and previous T-values:
[36] NMAX+(pNACC)↑1+pTNACC ◊ NEXP+0FNMAX-1+pTNACC
[37] AExpand number of records to accommodate catanation of them:
[38] TNACC+((1+pTNACC),NEXP)p0,[1](NACC,(0FNMAX-pNACC)p0)
[39] TNLOSS+((1+pTNLOSS),NEXP)p0,[1](NLOSS,(0FNMAX-pLOSS)p0)
[40] UPK:+LOOP×1NSIZE>CSIZE×(-1+(K+K+1)) AGo to next chunk to convert
[41] END: ASum over different values of K:
[42] TNACC++TNACC ◊ TNLOSS++TNLOSS
[43] ALump together accessions/losses past 12 months:
[44] TNACC+TNACC[11],+/11+TNACC ◊ TNLOSS+TNLOSS[11],+/11+TNLOSS

```

```

[0] CPALL+PDATE COMPALLPROB MB;BT;DLRO;TITLE1;TITLE2;RN;CN;FSTR;ET;CT;CPACC;CPLOSS;CPACCALL;CPLOSS
ALL;ACCALL;LOSSALL
[1] AComputes conditional probabilities of accession/loss after i months past 'PDATE',
[2] Agiven more than j months (prior to 'PDATE') in DEP, for all contracted DEPlengths,
[3] Afor records with mission box 'MB'
[4] AOther functions used are: 'TIEALLDLFILES', 'COMPPROB'
[5] BT+(100 365 12 24 60 60 1000)ITS ARecord beginning time of computation
[6] ATies all ASCII files with mission box 'MB', defines their sizes and ranks them:
[7] AFSIZERO< TIEALLDLFILES MB AResults are the rank orders of the 12 filesizes
[8] DLRO+1 ◊ CPACCALL< CPLOSSALL+(0 0)PADLMAX+0 AInitiate variables
[9] LOOP:AComputes estimated cond prob for successive DEPlengths in descending order of
[10] Afile sizes:
[11] MB COMPPROB FSIZERO[DLRO]
[12] ACatenate enough zeroes onto both variables to make dimensions fit:
[13] CPACC+CPACC,(0+(1+pCPACCALL)-pCPACC)p0 ◊ CPLOSS+CPLOSS,(0+(1+pCPLOSS)-pCPLOSS)p0
[14] CPACCALL<CPACCALL,((1+pCPACCALL),(0+(pCPACC)-(1+pCPACCALL)))p0
[15] CPLOSSALL<CPLOSSALL,((1+pCPLOSSALL),(0+(pCPLOSS)-(1+pCPLOSSALL)))p0
[16] CPACCALL<CPACCALL,[1]CPACC ACatenates results for different DEPlengths
[17] CPLOSSALL<CPLOSSALL,[1]CPLOSS ACatenates results for different DEPlengths
[18] +(12>DLRO+DLRO+1)/LOOP
[19] AIf matrix is empty catenate 12x13 matrix of 0's:
[20] CPACCALL<CPACCALL,(12,(0=1+pCPACCALL)x13)p0
[21] CPLOSSALL<CPLOSSALL,(12,(0=1+pCPLOSSALL)x13)p0
[22] AReplace normal order among DEPlengths: 12,11,...,1:
[23] ACCALL<CPACCALL<CPACCALL[!FSIZERO;]
[24] LOSSALL<CPLOSSALL<CPLOSSALL[!FSIZERO;]
[25] ACatenate all cond. prob's of accession and losses:
[26] CPALL+ACCALL,[.5]LOSSALL
[27] AET+(100 365 12 24 60 60 1000)ITS ARecord ending time of computation
[28] ACT+(ET-BT)/1000 ◊ CT+(60 60)TCT ◊ UTCFF ATime elapsed in min & sec
[29] A'COMPUTATION TIME WAS: ',(ACT[1]),' MINUTES AND ',(ACT[2]),' SECONDS.'
[30] +0 ASkip displaying results
[31]
[32] ASet up formating for results with title, column names & row names:
[33] TITLE1+'EST. COND. PROBS OF ACCESSION ',(T),' MONTHS FROM ',PDATE
[34] TITLE2+'GIVEN T MONTHS IN DEP FOR MISSION BOX ',MB
[35] CN+, T=, 0M, 1M, 2M, 3M, 4M, 5M, 6M, 7M, 8M, 9M,10M,11M,12M'
[36] RN+,DL=12,DL=11,DL=10,DL= 9,DL= 8,DL= 7,DL= 6,DL= 5,DL= 4,DL= 3,DL= 2,DL= 1'
[37] RN+ 12 5 ROWNAMES RN ◊ FSTR-'5A1,13F6.3'
[38] TITLE1+FSTR CENTER TITLE1 ◊ TITLE2+FSTR CENTER TITLE2
[39] CN+FSTR COLNAMES CN ◊ CPACCALL<FSTR OFMT(RN;12 13+CPACCALL)
[40] UTCNL ◊ UTCFLF ◊ TITLE1 ◊ TITLE2 ◊ UTCNUL ◊ CN ◊ CPACCALL
[41] TITLE1+'EST. COND. PROBS OF LOSS ',(T),' MONTHS FROM ',PDATE
[42] TITLE1+FSTR CENTER TITLE1
[43] CPLOSSALL<FSTR OFMT(RN;12 13+CPLOSSALL)
[44] UTCNL ◊ TITLE1 ◊ TITLE2 ◊ UTCNL ◊ CN ◊ CPLOSSALL

```

```

[0] MB COMPPROB DL;K;CSIZE;CHUNK;BIT;INDX;INDXA;INDXL;COMP;CD;AD;DD;ED;ADL;COMP;ALLADL;ALLDL;TIME
;NADL;NACC;NLOSS;PMFA;PMFL;SURVA;SURVL
[1] AComputes from an ASCII datafile with a specific mission box and contracted DEPlength
[2] AThe conditional probabilities of accession/loss after 'T' months (T=1,...12)
[3] AGiven survival in DEP of 0,1,2,... months, using all records closed by 'PDATE'
[4] ABoth 'T' and 'PDATE' are variables specified outside this function.
[5] ASame is true for the variable 'ADLMAX' redefined later in this function.
[6] AOther functions used: 'EXPLORE', 'CLOSEDPICK', 'REVROUND', 'PARSUM'
[7] CSIZE<-250800 A7600 records are selected at one time: 7600x33=250800
[8] K<-1 COMP<-0 3p0 AInitialize variables
[9] LOOP:CHUNK<-CSIZE\FSIZES[DL]-CSIZE*(K-1) ADefine size of next chunk to pick
[10] COMP->INREAD (-DL),82,CHUNK,(CSIZE*(K-1)) ARead another portion of file
[11] COMP<-0^2+((LCHUNK<-33),33)pCOMP AForm matrix of records
[12] ASelect records which are closed as of date specified by 'PDATE':
[13] COMP->PDATE CLOSEDPICK COMP->0=1+pCOMP/UPK AGo to upgrade 'K' if no such records.
[14] AFInd all records where accession/discharge date is not the same as contract date:
[15] INDXA<-(INDXA>0)/1pINDXA<~COMP[1;16]=COMP[1;12+16] ASame contract and accession dates
[16] INDXL<-(INDXL>0)/1pINDXL<~COMP[1;16]=COMP[1;18+16] ASame contract and discharge dates
[17] AIndeces of records with contract date different from accession/loss date:
[18] INDX<-(1+pCOMP)-INDXA,INDXL
[19] +(0=pINDX)/UPK AUpgrade the value of K if no such records
[20] AClosed records with accession/discharge date NOT on same day as contract date:
[21] COMP->COMP[INDX;]
[22] AWill recompute actual DEPlength and allow it to exceed contracted DEPlength(DL)
[23] Aand even 12 months:
[24] CD<-0 CONVDATE COMP AConvert contract dates to Julian dates
[25] AD<-12 CONVDATE COMP AConvert accession dates to Julian dates
[26] DD<-18 CONVDATE COMP AConvert discharge dates to Julian dates
[27] ED<-AD1DD A Take smaller of these as end of DEP (Julian of 0 is 693960)
[28] ACompute number of months actually spent in DEP (1M=365÷12) and make 0 shortest:
[29] ADL<-0\ADL+0 ROUND(ED-CD)+(365÷12)
[30] ADLMAX<-1/ADLMAX,ADL AThis is max possible actual DEPlength in this file
[31] AConvert actual DEPlengths to character matrix:
[32] ADL<-(pADL,-2)+((pADL),1)p' ',+(pADL),1)pADL
[33] ARetain only actual DEPlength and last digit of a '3' for accession
[34] Aor a '4' for discharge:
[35] COMP->ADL,((1+pCOMP),-1)+COMP
[36] COMP->COMP,[1]COMP AForm matrix of records of this type
[37] UPK:->LOOP\FSIZES[DL]>CSIZE*(-1+(K+1)) AGo to next chunk to select
[38] ACount numbers with various actual DEPlengths and accessions among them:
[39] NLOSS+NACC+NADL<-0p0 A TIME=0 AInitiate variables; 'TIME' is actual DEPlength
[40] TIMELOOP:
[41] INDX<-,~COMP[1;12]=(pCOMP[1;12])p-2+' ',+TIME
[42] INDX<-(INDX>0)/1pINDX AAll records with actual DEPlengths specified by 'TIME'
[43] NADL<-NADL,pINDX ATotal number of records of given actual DEPlength
[44] ACount accessions/losses among them:
[45] INDXA<,COMP[INDX;3]=~3 A INDXA<-(INDXA>0)/1pINDXA
[46] INDXL<,COMP[INDX;3]=~4 A INDXL<-(INDXL>0)/1pINDXL
[47] NACC<-NACC,pINDXA ANumber of accessions of given actual DEPlength
[48] NLOSS<-NLOSS,pINDXL ANumber of losses of given actual DEPlength
[49] +(ADLMAX>TIME+TIME+1)/TIMELOOP ADo next actual DEPlength
[50] PMFA<-NACC++/NADL A PMFL+NLOSS++/NADL AProbs of i months in DEP to accession or loss
[51] SURVA<(-T)+(+/PMFA)-PARSUM PMFA AProbability of more than j months in DEP to accession
[52] SURVL<(-T)+(+/PMFL)-PARSUM PMFL AProbability of more than j months in DEP to loss
[53] AConditional Probabilities of i more months in DEP to accession/loss,
[54] Agiven more than j months in DEP:
[55] CPACC<-(T+PMFA) DIV (SURVA+SURVL) ACPLOSS<-(T+PMFL) DIV (SURVA+SURVL)

```

```

[0] COLSIZE<-TN EXPLORE BIT;DATABIT;ZAO;IDX;DELTA;PERIOD;INTS;ERR
[1] A EXPLORES ASCII FILE TO FIND WHERE THE NEWLINE AND LINEFEED CHARACTERS ARE LOCATED. IT LOOKS
AT ONLY THE FIRST 'BIT' MANY CHARACTERS IN THE DATAFILE. IF THE NEWLINE AND LINEFEED CHARACTERS OCCU
R AT IRREGULAR INTERVALS IT RETURNS AN ERROR MESSAGE.
[2] BIT<-BIT\IINSIZE TN ARedefine 'BIT' to be no greater than filesize
[3] DATABIT<-INREAD TN,82,BIT,0
[4] ZAO<-(DATABIT=UTCNL)\v(DATABIT=UTCFL) ASHOW BY ONES THE NEWLINE AND LINEFEED CHARACTERS IN DATAB
IT TAKEN FROM DATA
[5] IDX<-ZAO\tZAO AINDEX OF ZEROES AND ONES
[6] DELTA<-IDX-1\IDX ATAKE DIFFERENCES IN CONSECUTIVE COMPONENTS
[7] PERIOD<-(DELTA>0)/DELTA AFIND PERIODS OF ACTUAL DATA CHARACTERS
[8] INTS<-PERIOD=COLSIZE<-PERIOD[1] ALL COMPONENTS OF 'PERIOD' SHOULD BE MULTIPLES OF THE FIRST COM
PONENT WHICH WILL BE THE NUMBER OF COLUMNS IN THE APL FILE
[9] ERR<-+/INTS#0 ROUND INTS
[10] +0\t0=ERR
[11] 'ASCII FILE SEEMS TO CONTAIN DATA IN AN IRREGULAR FORMAT INAPPROPRIATE FOR THIS COMPUTATION.'

```

```

[0] SELDATA←PDATE CLOSEDPICK DATA;AD;DD;ED;JPDATE;INDX
[1] ⋀Selects records which are closed as of date specified by 'PDATE',
[2] ⋀i.e. whose accession/discharge date is prior to 'PDATE'.
[3] AD←12 CONVDATE DATA ⋀Convert accession dates to Julian dates
[4] DD←18 CONVDATE DATA ⋀Convert discharge dates to Julian dates
[5] ED←AD+DD ⋀End of DEP is the earlier of accession/loss dates due to Julian date of 0
[6] JPDATE←DATABASE PDATE ⋀Convert date specified by 'PDATE' to Julian date
[7] ⋀Select indeces of records with contract dates prior to specified date:
[8] INDX←ED<JPDATE ⋁ INDX←(0<INDX)↑pINDX
[9] SELDATA←DATA[INDX;] ⋀Restrict data to closed records as of date specified by 'PDATE'

```

```

[0] SELDATA←PDATE CDPICKPRIOR DATA;CD;JPDATE;INDX
[1] ⋀Selects records whose contract date is prior to date specified by 'PDATE'
[2] ⋀Other functions used: 'CONVDATE', 'DATABASE'
[3] CD←0 CONVDATE DATA ⋀Convert contract dates to Julian dates
[4] JPDATE←DATABASE PDATE ⋀Convert date specified by 'PDATE' to Julian date
[5] ⋀Select indeces of records with contract dates prior to specified date:
[6] INDX←CD<JPDATE ⋁ INDX←(0<INDX)↑pINDX
[7] SELDATA←DATA[INDX;] ⋀Restrict data to records with contract dates prior to spec date

```

```

[0] JDATES←ST CONVDATE RAWDATA;DATES;NR
[1] ⋀Converts date that starts in column 'ST' of raw data to Julian date.
[2] JDATES←0↑0 ⋁ DATES←RAWDATA[,ST+16] ⋁ →(0=1↑pDATES)/0
[3] DATES←DATES,((1+pDATES),1)p' ⋁ DATES←((1+pDATES),3)p&(3p100)↑+,DATES
[4] LOOP:NR←1↑pDATES ⋁ JDATES←JDATES,DATEBASE((NR←1000\NR),3)↑DATES
[5] DATES←(NR,0)+DATES ⋁ →(0<1↑pDATES)/LOOP

```

```

[0] PARV←PARSUM V;VV;I;TRY
[1] ⋀COMPUTES ALL PARTIAL SUMS OF THE VECTOR 'V'.
[2] ⋀FIRST CREATES A SQUARE MATRIX, 'VV', WHOSE ROWS ARE
[3] ⋀ ALL IDENTICAL TO 'V':
[4] VV←((ρV),ρV)ρV←,V
[5] ⋀CREATES A LOWER TRIANGULAR MATRIX, 'TRY', OF 1'S,
[6] ⋀ MULTIPLIES IT BY 'VV' AND SUMS ALL ROWS TO CREATE
[7] ⋀ ALL THE PARTIAL SUMS OF 'V':
[8] TRY←I.→I←1ρV
[9] PARV←+/VV×TRY

```

```

[0] MRR←MOD REVROUND M
[1] ⋀ROUNDS THE ARRAY 'M' TO THE NEAREST MULTIPLE OF 'MOD'.
[2] MRR←(10.5+M÷MOD)×MOD

```

```

[0] MR←PP ROUND M
[1] ⋀Rounds the decimal numbers.
[2] MR←(10.5+M×10*PP)÷10*PP

```

```

[0] NRECS=COUNTALLDLRECS MB;FNAMES;TN;FSIZES
[1] ATies all ASCII files with mission box 'MB' in directory 'C:\USAREC\NEWDATA\MERGED'
[2] ACounts the number of records in each file with mission box 'MB' and DL=1,2,...,12.
[3] UNNTIE INNUMS ♦ FSIZES=0P0
[4] CLIBD '99 C:\USAREC\NEWDATA\MERGED' AEstablish library 99 as desired directory
[5] ADefine names of all files with misson box 'MB':
[6] FNAMES=(DLIB 99)[(12×MB-1)+112;1] ♦ TN+1
[7] ATie all files with mission box 'MB' and defines their file sizes:
[8] LOOP:(DLIBD 99,'\',FNAMES[TN;]) UNNTIE -TN
[9] FSIZES+FSIZES,UNSIZE -TN
[10] +(12≥TN+TN+1)/LOOP
[11] NRECS=FSIZES=33 ATThese are the numbers of records in these files

```

```

[0] PCTALLRECS=COUNTALLRECSPCT;MB;NRECS;NALLRECS;TITLE;CN;RN;FSTR
[1] ACounts records for all mission boxes and contracted DEPlengths.
[2] ADISplays percentages of records for each mission box and contracted DEPlengths.
[3] AOther function used: 'COUNTALLDLRECS'
[4] MB+1 ♦ NALLRECS=0 12P0 AInitiate variables
[5] LOOP: ACount records for a single mission box:
[6] NALLRECS=NALLRECS,[1]NRECS=COUNTALLDLRECS MB
[7] +(22≥MB+MB+1)/LOOP
[8] PCTALLRECS=100×NALLRECS+/+/NALLRECS AConvert to percentages of total number of records
[9] PCTALLRECS=PCTALLRECS,[1]+PCTALLRECS=PCTALLRECS,+/PCTALLRECS AAttach row & column sums
[10] ASet up formating for results with title, column names & row names:
[11] TITLE<'PERCENTAGE OF DEP RECORDS BY MISSION BOX(MB) AND CONTRACTED DEPLENGTH(DL)'
[12] CN<',MSBOX',,(12 4P',DL='),(12 -2)+#12 1P112),',TOTAL'
[13] RN<,(22 4P',MB='),(22 -2)+#22 1P122),',TOTAL'
[14] RN+23 5 ROWNAMES RN ♦ FSTR<'5A1,12F6.1,1F8.1'
[15] TITLE+FSTR CENTER TITLE
[16] CN+FSTR COLNAMES CN ♦ PCTALLRECS=FSTR OFMT (RN;PCTALLRECS)
[17] TITLE ♦ UTCNUL ♦ CN ♦ PCTALLRECS

```

```

[0] COUNTALLLONGRECS;MB;ALLNINST;DL;ALLDLNN;NINST;RN;FSTR;ALLNN;ALLNNL;NN;ALLNNO
[1] ACounts for all mission boxes and contracted DEPlengths the number of records
[2] Awhose actual DEPlength is longer than the contracted DEPlength
[3] AOther functions used are: 'COUNTLONGRECS', 'ROWNAMES', 'CENTER', 'COLNAMES'
[4] MB+1 ♦ ALLNN=0 12 3P0
[5] MBLOOP:DL+1 ♦ ALLDLNN=0 3P0
[6] DLLOOP:ALLDLNN-ALLDLNN,[1]NN+MB COUNTLONGRECS DL
[7] +(12≥DL+1)/DLLOOP
